

What is erosion and sediment control?

Erosion and sediment controls prevent soil, sand, and other materials from being washed or blown off a building site and into stormwater drains.

Sediment runoff can affect the health and enjoyment of our precious rivers, harbours, and other waterways. It can also cause blockages, flooding, and harm marine life.

Why do I need erosion and sediment controls?

- If you're building a home, renovating, or landscaping, you must use erosion and sediment controls on your site. Many councils also require a control plan before work begins.
- Using erosion and sediment controls helps reduce costs and prevents delays by avoiding the need to replace materials or pay hefty fines.
- Effective controls keep you, your workers, and the community safe, and protect our waterways and environment.

Don't risk getting fined!

Penalty Notices or 'On-the-Spot fines' are issued under the POEO (Protection of the Environment Operations) Act for offences such as water pollution or ignoring clean-up notices.

In 2024, fines increased with higher penalties for repeat offences:

- **\$15,000 for a first offence and \$22,500 for a second offence for individuals**
- **\$30,000 for a first offence and \$45,000 for a second offence for corporations.**

What is the Get the Site Right?

'Get the Site Right' is a joint taskforce of local councils, catchment groups, and the NSW Environment Protection Authority (EPA), which targets erosion and sediment control on commercial and residential building sites across NSW.

We work with developers, builders, and the community to raise awareness about the harmful effects of sediment runoff on our creeks, rivers, harbours and beaches – highlighting the important role they play in helping to improve water quality and protect our natural environment and wildlife.

For more information on how to improve erosion and sediment control on your site, contact your local council or visit: ourlivingriver.com.au/getthesiteright

IS YOUR SITE RIGHT?

Helpful tips for home builders, renovators, landscapers, and DIY enthusiasts

SAVE TIME, MONEY, AND PROTECT OUR BEAUTIFUL WATERWAYS

Whether you're building, renovating, or landscaping, properly managing your site not only prevents sediment runoff, building waste, and litter from polluting our waterways, it saves you time and money replacing valuable materials and avoiding costly fines.

PREVENT SEDIMENT RUNOFF

INSTALL SEDIMENT FENCING

Place sediment fences around the perimeter of your site to trap soil before it reaches stormwater drains.

KEEP VEGETATION ON SITE

Leave as much vegetation on the site and street verge as possible during construction, to stabilise soil and reduce erosion.

ESTABLISH STABILISED SITE ACCESS

Use large gravel or rock to create a stable entry/exit pad, preventing sediment leaving the site and washing into drains.

TIDY YOUR SITE DAILY

Collect any loose soil, sand, and other sediment daily, and never hose or sweep it into the gutter or stormwater drain.

PREPARE FOR WET WEATHER

MONITOR WEATHER FORECASTS

Keep track of weather conditions, such as rain and high wind, to prepare your site and prevent erosion or flooding.

CHECK AND MAINTAIN CONTROLS

Ensure sediment fences and other controls are well-maintained. Repair or replace any damaged sections as needed.

COVER STOCKPILES

Securely cover any piles of soil, sand, mulch, and other building materials to prevent them from washing or blowing away.

KEEP STORMWATER DRAINS CLEAR

Check stormwater drains around your property for sediment, building waste, or leaf litter to prevent blockages and flooding.

MANAGE LITTER AND WASTE

STORE WASTE SECURELY

Place building waste and loose litter in a bin with a tight-fitting lid or skip that is covered securely.

CONDUCT REGULAR CLEAN-UPS

Tidy your site regularly, especially before rain, to remove small items of litter and other waste that can be washed away.

WASH EQUIPMENT WISELY

Clean equipment such as cement trowels, paint brushes, and trays in a designated area, away from stormwater drains.

RECYCLE AND DISPOSE RESPONSIBLY

Separate recyclable materials and dispose of hazardous chemicals and other building waste correctly.
